**ONE FINAL
QUESTION!**

What is the first stage of the digestive system?

1

The Stomach

2

The Mouth

3

The Intestines

The answer is the Mouth!
Well done if you got it right!

1

The Stomach

2

The Mouth

3

The Intestines

Your mouth is where digestion begins!

Your **teeth** help grasp, tear, rip and crush up your food into smaller pieces

Saliva in your mouth mixed with your food to moisten it, which also contains an enzyme (called amylase) which helps break carbohydrates into sugar.

Your **tongue** helps to move food around in mouth and push your food to the back of your mouth to be swallowed.
